UVASPOP

Modular high intensity UV units

System-Features

• Wide range of emission spectra

• Irradiation for large surface areas possible

Advantages

• Multi-functional
UVASPOT –
Modular high intensity UV units

The UVASPOT ranges are modular high intensity UV units. They achieve very high uniformity throughout the irradiation field.

Through various lamp and filter configurations, spectra for applications in the range of UVA, UVB, UVC, VIS and black-light can be produced.

A separate power supply unit controls the lamp. In multiple lamp systems the power supply units can be integrated into a single switch cabinet.

With several units combined larger areas can be exposed with high UV efficiency and uniformity throughout the irradiation field. Even irradiation of extruded continuous products is possible. For this purpose the UVASPOT units are mounted in triangular or even hexagonal positions.

Examples of application

- curing of UV activated polyester resins and pottants (e.g. tanks, boxes, tubes, injection moulding and deep drawn components, repairs to metal and plastic components)
- bonding of glass, plastics and metal with UV curing adhesives (e.g. electronic, fine mechanical and optical components)
- curing of conformal coatings on printed circuit boards
- examination for UV resistance of colours, plastics, lacquers and coatings
- UV irradiation for chemical, biological and pharmaceutical research
- fluorescent examination of materials
